

## Science Fair

Friday, February 4<sup>th</sup>.

Every Year our students in the k- 6<sup>th</sup> grade pick a friend and together, pick a Science experiment to work on.

They start by working on their science boards, rehearsing their lines, and experimenting with their Science project, hoping their hypothesis will be correct.

On the morning of the fair, everyone is excited! The experiments have been set up, lines have been learned and the students are ready to present their experiments in front of the judges and answer questions relating to their experiments. The judges get together after everyone is done and using strict judging criteria announce the winners.

The 1<sup>st</sup> place winners receive a Blue Ribbon and a Science Medallion, 2<sup>nd</sup> place, a red ribbon and 3<sup>rd</sup> place, a white ribbon. All students receive a ribbon for participating.

In the evening we invite all our parents to sit in the classrooms & watch proudly as their children present their experiments. It is great learning atmosphere!
